Foresight Data StAMP

AI MEDICAL DATA PASSPORT

Medical data certified AI ready in place, through five gates, each passed gate a stamp in the dataset's passport. Stamped data never leaves the hospital: it answers questions and trains models through a metered federated layer, and the value flows back to the patients and citizens who own it.

Applicant: Foresight Institute, Berlin node. Duration: 12 months. Project lead: Dr. Babita Singh. Submitted to SPRIND, 16 October 2026.

Hospital data, as found

Genomes, phenotypes, clinical text, registries. Undocumented conventions, consent as a PDF, provenance in a notebook.

26 "cancer mutations" were mouse DNA

1 Existence

Do you know what you have?

Checksum and type every file: assay, tissue, time point, vendor, reference build.

✓ All files typed and hashed

2 Meaning

Does every value carry its context?

One reference genome, one ID per sample, HPO phenotypes, resolvable codes and units, one Phenopacket per patient.

✓ 95% of fields mapped

3 Trust

Can you prove where each value came from?

Replay samples through recorded tools, identity and contamination checks, audit inferred labels, hash-linked provenance per step.

✓ Every value traceable to raw file and tool

4 Agency

Is permission machine-readable?

GA4GH DUO consent terms per record, purpose and expiry per grant, patient-readable access log, revocation reaches the next training round.

✓ 100% of records carry DUO terms

5 Use

Can a model learn without the data leaving?

Outside Beacon v2 query, one federated training round, no access without a credential. Raw files never leave the host.

✓ Query and training round both succeed

AI MEDICAL DATA PASSPORT

StAMP certificate, publishable without the data

STAMPED 5 / 5 2026

Dataset Osteosarcoma cohort
Patients 1,284
Holder Hospital Cell, Berlin
Modality WGS, RNA, HPO, notes

A B C D E

1 Existence	100%
2 Meaning	97%
3 Trust	100%
4 Agency	100%
5 Use	pass

Signed `sha256 3f9a…c21e`
Location: data stays in the hospital
Valid 12 months, re-stamped on change
Consent: DUO GRU, HMB; 3 revoked, honoured

WHAT STAMPED DATA UNLOCKS

Federated model training
Models travel to the data. Every training round carries a verifiable consent manifest.

Beacon v2 discovery
Outside researchers ask "does this variant exist here?" and get yes or no, never the record.

Metered access ledger
Each query and round logged with purpose and split. Hospitals and patients visibly credited.

Patient wallet and citizen science
Patients see which models their data trained, hold consent as a standing choice, and study their own health.

Value loop:
data stays sovereign, answers flow out, value flows back to the people who own the data.

THE STAMP OFFICE, FORESIGHT INSTITUTE BERLIN NODE

Babita Singh, PhD
Project lead. Owns Gate 2 Meaning and standards
Cancer genomics, AI product, biosafety. Co-author GA4GH Beacon v2; led the six-hospital Beacon pilot. Ex AstraZeneca, EMBL-EBI, CRG. Founder, Genethropic.

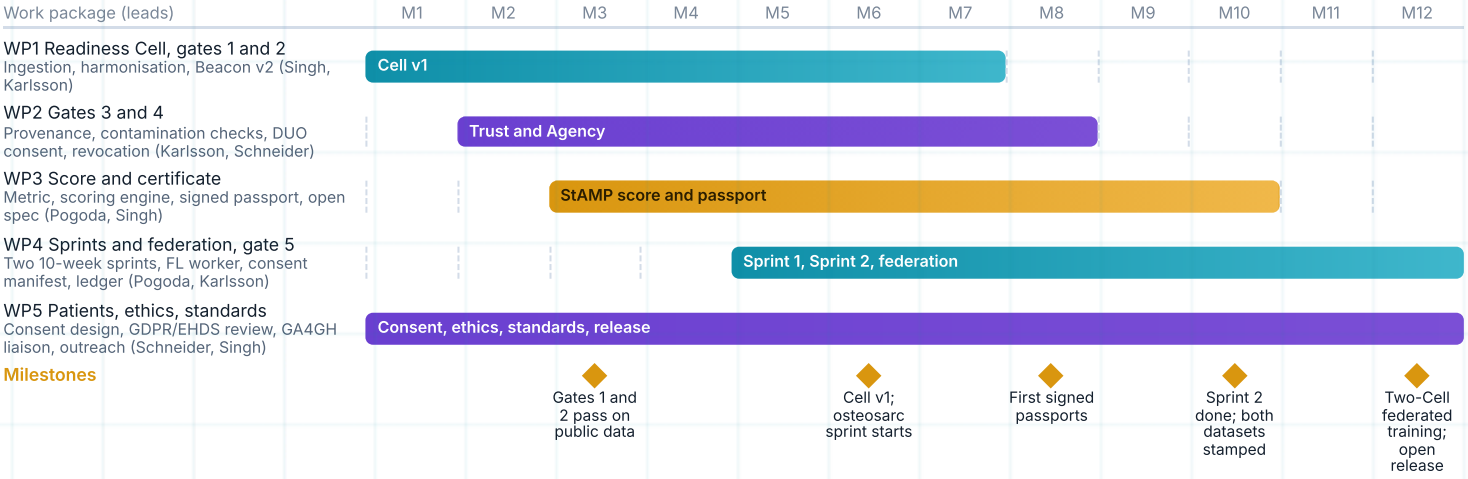

Kazik Pogoda
AI systems architect. Owns the score and the platform
25 years of engineering, cognitive science. Founder of Xemantic; Foresight-affiliated autonomous research harnesses.

Paul Schneider, MD, PhD
Clinical and ethics lead. Owns Gate 4 Agency, regulation, patients
Medical doctor, epidemiology, health economics, research software. Foresight AI Node Berlin.

Martin Karlsson
AI engineer. Owns Cell integration and Gate 5 Use
CEO and co-founder, Lateral GmbH (Berlin, 2013), machine-learning software for research and document navigation; co-initiator, coordination.network. ML products, backend engineering, data security.

Contracted in: GDPR and EHDS legal review, hospital informatics contact.

WORK PACKAGES AND MILESTONES, 12 MONTHS

Two 10-week readiness sprints on public data (osteosarcoma cohort; Synthea plus Phenopacket Store), then open release of the Cell, the score specification and the sprint playbook. Passport values shown are illustrative.
